Chapter 1

Source content

This folder should contain only `hpp/cpp` files of your implementation. You can also place `hpp` files in a separate directory `include`.

You can create a summary of files here. It might be useful to describe file relations, and brief summary of their content.

Chapter 2

Namespace Index

2.1 Namespace List

Here is a list of all namespaces with brief descriptions:

Ui	11
--------------------	----

Chapter 3

Hierarchical Index

3.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

QGraphicsPixmapItem	
BuildBasicTowerIcon	15
BuildMachineGunTowerIcon	16
BuildShotgunTowerIcon	17
Bullet	19
Pellet	48
Cockroach	22
Adult_cockroach	13
Child_cockroach	21
Mother_cockroach	47
ItemNotPlaceableTile	42
ItemPlaceableTile	43
Tower	51
BasicTower	14
MachineGunTower	44
ShotgunTower	49
QGraphicsView	
Game	31
QMainWindow	
MainWindow	46
QObject	
Bullet	19
Cockroach	22
ItemNotPlaceableTile	42
ItemPlaceableTile	43
Tower	51
Wallet	55
Game	31

Chapter 4

Class Index

4.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

Adult_cockroach	13
BasicTower	14
BuildBasicTowerIcon	15
BuildMachineGunTowerIcon	16
BuildShotgunTowerIcon	17
Bullet	19
Child_cockroach	21
Cockroach	22
Game	31
ItemNotPlaceableTile	42
ItemPlaceableTile	43
MachineGunTower	44
MainWindow	46
Mother_cockroach	47
Pellet	48
ShotgunTower	49
Tower	51
Wallet	55

Chapter 5

File Index

5.1 File List

Here is a list of all files with brief descriptions:

src/adult_cockroach.cpp	59
src/basic_tower.cpp	59
src/build_basic_tower_icon.cpp	60
src/build_machine_gun_tower_icon.cpp	60
src/build_shotgun_tower_icon.cpp	61
src/bullet.cpp	61
src/child_cockroach.cpp	62
src/cockroach.cpp	63
src/game.cpp	64
src/item_not_placeble_tile.cpp	77
src/item_placeble_tile.cpp	78
src/machine_gun_tower.cpp	78
src/main.cpp	78
src/mainwindow.cpp	79
src/mother_cockroach.cpp	80
src/pellet.cpp	80
src/shotgun_tower.cpp	81
src/tower.cpp	81
src/wallet.cpp	82
src/include/adult_cockroach.h	64
src/include/basic_tower.h	64
src/include/build_basic_tower_icon.hpp	65
src/include/build_machine_gun_tower_icon.hpp	65
src/include/build_shotgun_tower_icon.hpp	66
src/include/bullet.h	66
src/include/child_cockroach.h	67
src/include/cockroach.h	68
src/include/game.hpp	69
src/include/item_not_placeble_tile.h	72
src/include/item_placeble_tile.h	73
src/include/machine_gun_tower.h	73
src/include/mainwindow.h	74
src/include/mother_cockroach.h	75
src/include/pellet.h	75
src/include/shotgun_tower.h	76
src/include/tower.h	76
src/include/wallet.hpp	77

Chapter 6

Namespace Documentation

6.1 Ui Namespace Reference

Chapter 7

Class Documentation

7.1 Adult_cockroach Class Reference

```
#include <adult_cockroach.h>
```

Inheritance diagram for Adult_cockroach:

Public Member Functions

- [Adult_cockroach](#) (int health, int speed, int value, QList< QPointF >pointsToFollow, QGraphicsItem *parent=0)

Construct a new [Adult_cockroach::Adult_cockroach](#) object This subclass defines the adult cockroach object, it defines the speed, value, enemy path, the initial location and position offset appear on the map.

Additional Inherited Members

7.1.1 Constructor & Destructor Documentation

7.1.1.1 Adult_cockroach()

```
Adult_cockroach::Adult_cockroach (
    int health,
    int speed,
    int value,
    QList< QPointF > pointsToFollow,
    QGraphicsItem * parent = 0 )
```

Construct a new [Adult_cockroach::Adult_cockroach](#) object This subclass defines the adult cockroach object, it defines the speed, value, enemy path, the initial location and position offset appear on the map.

Parameters

<i>health</i>	Cockroach health
<i>speed</i>	Speed
<i>value</i>	Price of Cockroach
<i>points_ToFollow</i>	Coordinates the cockroach will follow
<i>parent</i>	QGraphicsItem

The documentation for this class was generated from the following files:

- [src/include/adult_cockroach.h](#)
- [src/adult_cockroach.cpp](#)

7.2 BasicTower Class Reference

```
#include <basic_tower.h>
```

Inheritance diagram for BasicTower:

Public Slots

- void [AcquireTarget](#) ()
BasicTower::AcquireTarget Uses Tower::AcquireTarget()

Public Member Functions

- [BasicTower](#) (QGraphicsItem *parent=0)
Constructor BasicTower Sets graphics, creates area_of_effect and sets barrel lenght.

Additional Inherited Members

7.2.1 Constructor & Destructor Documentation

7.2.1.1 BasicTower()

```
BasicTower::BasicTower (
    QGraphicsItem * parent = 0 )
```

Constructor [BasicTower](#) Sets graphics, creates area_of_effect and sets barrel lenght.

Parameters

<i>parent</i>	An optional parent
---------------	--------------------

7.2.2 Member Function Documentation

7.2.2.1 AcquireTarget

```
void BasicTower::AcquireTarget ( ) [slot]
```

[BasicTower::AcquireTarget](#) Uses [Tower::AcquireTarget\(\)](#)

The documentation for this class was generated from the following files:

- [src/include/basic_tower.h](#)
- [src/basic_tower.cpp](#)

7.3 BuildBasicTowerIcon Class Reference

```
#include <build_basic_tower_icon.hpp>
```

Inheritance diagram for BuildBasicTowerIcon:

Public Member Functions

- [BuildBasicTowerIcon](#) (QGraphicsItem *parent=0)
Constructor [BuildBasicTowerIcon](#) Builds basic tower icon.
- void [mousePressEvent](#) (QGraphicsSceneMouseEvent *event)
Add basic tower and add icon to cursor.

7.3.1 Constructor & Destructor Documentation

7.3.1.1 BuildBasicTowerIcon()

```
BuildBasicTowerIcon::BuildBasicTowerIcon (
    QGraphicsItem * parent = 0 )
```

Constructor [BuildBasicTowerIcon](#) Builds basic tower icon.

Parameters

<i>parent</i>	An optional parent
---------------	--------------------

7.3.2 Member Function Documentation

7.3.2.1 mousePressEvent()

```
void BuildBasicTowerIcon::mousePressEvent (
    QGraphicsSceneMouseEvent * event )
```

Add basic tower and add icon to cursor.

Parameters

<i>event</i>	QGraphicsSceneMouseEvent pointer
--------------	----------------------------------

Returns

None

The documentation for this class was generated from the following files:

- [src/include/build_basic_tower_icon.hpp](#)
- [src/build_basic_tower_icon.cpp](#)

7.4 BuildMachineGunTowerIcon Class Reference

```
#include <build_machine_gun_tower_icon.hpp>
```

Inheritance diagram for BuildMachineGunTowerIcon:

Public Member Functions

- [BuildMachineGunTowerIcon](#) (QGraphicsItem *parent=0)
Constructor [BuildMachineGunTowerIcon](#) Builds machine tower icon.
- void [mousePressEvent](#) (QGraphicsSceneMouseEvent *event)
Add machine tower and add icon to cursor.

7.4.1 Constructor & Destructor Documentation

7.4.1.1 BuildMachineGunTowerIcon()

```
BuildMachineGunTowerIcon::BuildMachineGunTowerIcon (
    QGraphicsItem * parent = 0 )
```

Constructor [BuildMachineGunTowerIcon](#) Builds machine tower icon.

Parameters

<i>parent</i>	An optional parent
---------------	--------------------

7.4.2 Member Function Documentation

7.4.2.1 mousePressEvent()

```
void BuildMachineGunTowerIcon::mousePressEvent (
    QGraphicsSceneMouseEvent * event )
```

Add machine tower and add icon to cursor.

Parameters

<i>event</i>	QGraphicsSceneMouseEvent pointer
--------------	----------------------------------

Returns

None

The documentation for this class was generated from the following files:

- [src/include/build_machine_gun_tower_icon.hpp](#)
- [src/build_machine_gun_tower_icon.cpp](#)

7.5 BuildShotgunTowerIcon Class Reference

```
#include <build_shotgun_tower_icon.hpp>
```

Inheritance diagram for BuildShotgunTowerIcon:

Public Member Functions

- [BuildShotgunTowerIcon](#) (QGraphicsItem *parent=0)
Constructor [BuildShotgunTowerIcon](#) Builds shot tower icon.
- void [mousePressEvent](#) (QGraphicsSceneMouseEvent *event)
Add machine tower and add icon to cursor.

7.5.1 Constructor & Destructor Documentation

7.5.1.1 BuildShotgunTowerIcon()

```
BuildShotgunTowerIcon::BuildShotgunTowerIcon (
    QGraphicsItem * parent = 0 )
```

Constructor [BuildShotgunTowerIcon](#) Builds shot tower icon.

Parameters

<i>parent</i>	An optional parent
---------------	--------------------

7.5.2 Member Function Documentation

7.5.2.1 mousePressEvent()

```
void BuildShotgunTowerIcon::mousePressEvent (
    QGraphicsSceneMouseEvent * event )
```

Add machine tower and add icon to cursor.

Parameters

<i>event</i>	QGraphicsSceneMouseEvent pointer
--------------	----------------------------------

Returns

None

The documentation for this class was generated from the following files:

- [src/include/build_shotgun_tower_icon.hpp](#)
- [src/build_shotgun_tower_icon.cpp](#)

7.6 Bullet Class Reference

```
#include <bullet.h>
```

Inheritance diagram for Bullet:

Public Slots

- void [move](#) ()
Timer connected slot that makes the bullet move along its current angle A bullet ill only travel as far as the range allows. Checks for collisions with cockroaches and if it hits, it will cause damage to the cockroach and destroy itself.
- double [get_max_range](#) ()
Bullet::get_max_range Get function for max_range.
- double [get_distance_travelled](#) ()
Bullet::get_distance_travelled Get function for distance_travelled.
- void [set_distance_travelled](#) (double distance)
Bullet::set_distance_travelled Set function for distance_travelled.

Public Member Functions

- [Bullet](#) (int damage, double range)
- [~Bullet](#) ()
- int [GetDamage](#) ()

7.6.1 Constructor & Destructor Documentation

7.6.1.1 Bullet()

```
Bullet::Bullet (
    int damage,
    double range )
```

7.6.1.2 ~Bullet()

```
Bullet::~~Bullet ( )
```

7.6.2 Member Function Documentation

7.6.2.1 get_distance_travelled

```
double Bullet::get_distance_travelled ( ) [slot]
```

[Bullet::get_distance_travelled](#) Get function for distance_travelled.

Returns

distance_travelled Returns the distance the bullet has travelled

7.6.2.2 get_max_range

```
double Bullet::get_max_range ( ) [slot]
```

[Bullet::get_max_range](#) Get function for max_range.

Returns

max_range Returns max_range

7.6.2.3 GetDamage()

```
int Bullet::GetDamage ( ) [inline]
```

7.6.2.4 move

```
void Bullet::move ( ) [slot]
```

Timer connected slot that makes the bullet move along its current angle A bullet ill only travel as far as the range allows. Checks for collisions with cockroaches and if it hits, it will cause damage to the cockroach and destroy itself.

Returns

None

7.6.2.5 set_distance_travelled

```
void Bullet::set_distance_travelled (
    double distance ) [slot]
```

[Bullet::set_distance_travelled](#) Set function for distance_travelled.

Parameters

<i>distance</i>	
-----------------	--

The documentation for this class was generated from the following files:

- [src/include/bullet.h](#)
- [src/bullet.cpp](#)

7.7 Child_cockroach Class Reference

```
#include <child_cockroach.h>
```

Inheritance diagram for Child_cockroach:

Public Member Functions

- [Child_cockroach](#) (int health, int speed, int value, QList< QPointF > pointsToFollow, int posit_index, QPointF q_offset, QGraphicsItem *parent=0)

Construct a new [Child_cockroach::Child_cockroach](#) object it defines the speed, value, enemy path, the initial location and position offset appear on the map.

Additional Inherited Members

7.7.1 Constructor & Destructor Documentation

7.7.1.1 Child_cockroach()

```
Child_cockroach::Child_cockroach (
    int health,
    int speed,
    int value,
    QList< QPointF > pointsToFollow,
    int posit_index,
    QPointF q_offset,
    QGraphicsItem * parent = 0 )
```

Construct a new [Child_cockroach::Child_cockroach](#) object it defines the speed, value, enemy path, the initial location and position offset appear on the map.

Parameters

<i>health</i>	Cockroach health
<i>speed</i>	Speed
<i>value</i>	Price of Cockroach
<i>points_ToFollow</i>	Coordinates the cockroach will follow
<i>posit_index</i>	Index in enemy path QList
<i>q_offset</i>	Position offset appear on the map
<i>parent</i>	QGraphicsItem

The documentation for this class was generated from the following files:

- [src/include/child_cockroach.h](#)
- [src/child_cockroach.cpp](#)

7.8 Cockroach Class Reference

```
#include <cockroach.h>
```

Inheritance diagram for Cockroach:

Public Slots

- virtual void [Move](#) ()
Defines how cockroach move, when cockroach get close to destination, set destination to the next.
- virtual void [GotHit](#) (int damage)
When croach receive hit, decrease health.

Public Member Functions

- [Cockroach](#) ()=default
- [Cockroach](#) (int health, int speed, int value, QList< QPointF > pointsToFollow, QGraphicsItem *parent=0)
Construct a new [Cockroach](#)::[Cockroach](#) object This [Cockroach](#) is the base class of all three kinds of [Cockroach](#) It initialize the health, speed, value and enemy path The function move() and GotHit are overwritten by the subclasses.
- [Cockroach](#) (const [Cockroach](#) &Coch)=delete
- [Cockroach](#) & operator= ([Cockroach](#) &coch)=delete
- ~[Cockroach](#) ()=default
- int [GetValue](#) () const
Get the cockroach value.
- int [GetHealth](#) () const
Get the cockroach health.
- int [GetSpeed](#) () const
Get the cockroach speed.
- int [GetDestIndex](#) () const
Find the location of the current destination.
- QPointF [GetDest](#) () const
- QList< QPointF > [GetPointList](#) () const

Protected Member Functions

- void [PreventCollide](#) ()
Defines actions when cockroach collide.
- void [PreventCollidedToCocsh](#) ()
Defines actions when cockroach collide to other cockroach.
- void [PreventOutOfBoundry](#) ()
Defines actions when cockroach collide to boundary.
- void [BounceToWall](#) ()
Defines actions when cockroach collide to wall.
- void [WalkTo](#) (QPointF)
Defines how cockroach take steps to the destination.
- bool [IsDead](#) ()
Checks if cockroach is dead.
- int [RotateToPoint](#) (QPointF p)
Defines how enemy change its direction.

Protected Attributes

- `QList< QPointF > points_`
- `QPointF dest_`
- `int destList_index_`
- `int health_`
- `int speed_`
- `int value_`
- `double dx`
- `double dy`
- `int assB`
- `qreal variant_ = 0`
- `QTimer * timer_ = nullptr`
- `QList< QGraphicsItem * > colliding_items`

7.8.1 Constructor & Destructor Documentation

7.8.1.1 Cockroach() [1/3]

```
Cockroach::Cockroach ( ) [default]
```

7.8.1.2 Cockroach() [2/3]

```
Cockroach::Cockroach (
    int health,
    int speed,
    int value,
    QList< QPointF > pointsToFollow,
    QGraphicsItem * parent = 0 )
```

Construct a new `Cockroach::Cockroach` object This `Cockroach` is the base class of all three kinds of `Cockroach` It initialize the health, speed, value and enemy path The function `move()` and `GotHit` are overwritten by the subclasses.

Parameters

<i>health</i>	<code>Cockroach</code> health
<i>speed</i>	Speed
<i>value</i>	Price of <code>Cockroach</code>
<i>points_ToFollow</i>	Coordinated the cockroach will follow
<i>parent</i>	<code>QGraphicsItem</code>

7.8.1.3 Cockroach() [3/3]

```
Cockroach::Cockroach (
    const Cockroach & Coch ) [delete]
```

7.8.1.4 ~Cockroach()

```
Cockroach::~~Cockroach ( ) [default]
```

7.8.2 Member Function Documentation

7.8.2.1 BounceToWall()

```
void Cockroach::BounceToWall ( ) [protected]
```

Defines actions when cockroach collide to wall.

Parameters

None	
------	--

Returns

None

7.8.2.2 GetDest()

```
QPointF Cockroach::GetDest ( ) const [inline]
```

7.8.2.3 GetDestIndex()

```
int Cockroach::GetDestIndex ( ) const
```

Find the location of the current destination.

Parameters

None	
------	--

Returns

index int

7.8.2.4 GetHealth()

```
int Cockroach::GetHealth ( ) const
```

Get the cockroach health.

Parameters

<i>None</i>	
-------------	--

Returns

health_ health of cockroach

7.8.2.5 GetPointList()

```
QList< QPointF > Cockroach::GetPointList ( ) const [inline]
```

7.8.2.6 GetSpeed()

```
int Cockroach::GetSpeed ( ) const
```

Get the cockroach speed.

Parameters

<i>None</i>	
-------------	--

Returns

speed_ speed of cockroach

7.8.2.7 GetValue()

```
int Cockroach::GetValue ( ) const
```

Get the cockroach value.

Parameters

<i>None</i>	
-------------	--

Returns

value_ value of cockroach

7.8.2.8 GotHit

```
void Cockroach::GotHit (
    int damage ) [virtual], [slot]
```

When croach receive hit, decrease health.

Parameters

<i>damage</i>	
---------------	--

7.8.2.9 IsDead()

```
bool Cockroach::IsDead ( ) [protected]
```

Checks if cockroach is dead.

Returns

true
false

7.8.2.10 Move

```
void Cockroach::Move ( ) [virtual], [slot]
```

Defines how cockroach move, when cockroach get close to destination, set destination to the next.

Parameters

<i>None</i>	
-------------	--

Returns

None

7.8.2.11 operator=()

```
Cockroach & Cockroach::operator= (
    Cockroach & coch ) [delete]
```

7.8.2.12 PreventCollide()

```
void Cockroach::PreventCollide ( ) [protected]
```

Defines actions when cockroach collide.

Parameters

None	
------	--

Returns

None

7.8.2.13 PreventCollidedToCocsh()

```
void Cockroach::PreventCollidedToCocsh ( ) [protected]
```

Defines actions when cockroach collide to other cockroach.

Parameters

None	
------	--

Returns

None

7.8.2.14 PreventOutOfBoundry()

```
void Cockroach::PreventOutOfBoundry ( ) [protected]
```

Defines actions when cockroach collide to boundary.

Parameters

<i>None</i>	
-------------	--

Returns

None

7.8.2.15 RotateToPoint()

```
int Cockroach::RotateToPoint (
    QPointF p ) [protected]
```

Defines how enemy change its direction.

Parameters

<i>p</i>	The destination point
----------	-----------------------

Returns

In.length() the distance to next point

7.8.2.16 WalkTo()

```
void Cockroach::WalkTo (
    QPointF nextPoint ) [protected]
```

Defines how cockroach take steps to the destination.

Parameters

<i>nextPoint</i>	destination point
------------------	-------------------

Returns

None

7.8.3 Member Data Documentation

7.8.3.1 assB

```
int Cockroach::assB [protected]
```

7.8.3.2 colliding_items

```
QList<QGraphicsItem *> Cockroach::colliding_items [protected]
```

7.8.3.3 dest_

```
QPointF Cockroach::dest_ [protected]
```

7.8.3.4 destList_index_

```
int Cockroach::destList_index_ [protected]
```

7.8.3.5 dx

```
double Cockroach::dx [protected]
```

7.8.3.6 dy

```
double Cockroach::dy [protected]
```

7.8.3.7 health_

```
int Cockroach::health_ [protected]
```

7.8.3.8 points_

```
QList<QPointF> Cockroach::points_ [protected]
```

7.8.3.9 speed_

```
int Cockroach::speed_ [protected]
```

7.8.3.10 timer_

```
QTimer* Cockroach::timer_ = nullptr [protected]
```

7.8.3.11 value_

```
int Cockroach::value_ [protected]
```

7.8.3.12 variant_

```
qreal Cockroach::variant_ = 0 [protected]
```

The documentation for this class was generated from the following files:

- [src/cockroach.cpp](#)

7.9 Game Class Reference

```
#include <game.hpp>
```

Inheritance diagram for Game:

Public Slots

- void [SpawnChild](#) ()
Slot for spawning child cockroaches.
- void [SpawnAdult](#) ()
Slot for spawning adult cockroaches.
- void [SpawnMother](#) ()
Slot for spawning mother cockroaches.
- void [StartWave](#) ()
Slot starting the wave and creating the enemies.
- void [IsWaveComplete](#) ()
Slot for checking if the current wave is complete.
- void [WaveComplete](#) ()
Slot for handling when wave is complete.
- void [WaitForPlayer](#) ()
Slot for Waiting for the player to start the wave again.
- void [ResetLevel](#) ()
Waiting for player ot start the wave again.
- void [CreateNewLevel](#) ()
Create map layout based on the current level.
- void [UpdateBalance](#) ()
Slot updating player balance in game view.

Signals

- void [StartNextWave](#) (void)
- void [GameOver](#) (void)

Public Member Functions

- [Game](#) (int tile_width, int tile_height, int player_balance)
Construct a new [Game::Game](#) object.
- [~Game](#) ()
Destroy the [Game::Game](#) object.
- void [createEnemies](#) (int child_ammount, int adult_ammount, int mother_ammount, int interval)
Create enemies and set their spawn time.
- void [setCursor](#) (QString filename)
Change the cursor to the picture given as parameter.
- void [mouseMoveEvent](#) (QMouseEvent *event)
Cursor follows the mouse.
- void [mousePressEvent](#) (QMouseEvent *event)
Tracks the items pressed by the mouse.
- void [LevelTwo](#) ()

Public Attributes

- QGraphicsScene * [scene](#)
- QGraphicsView * [view](#)

7.9.1 Constructor & Destructor Documentation

7.9.1.1 Game()

```
Game::Game (
    int tile_width,
    int tile_height,
    int player_balance )
```

Construct a new [Game::Game](#) object.

Parameters

<i>tile_width</i>	Tile width for the game view
<i>tile_height</i>	Tile height for the game view
<i>player_balance</i>	Player balance at the start return None

7.9.1.2 ~Game()

Game::~~Game ()

Destroy the [Game::](#) [Game](#) object.

7.9.2 Member Function Documentation

7.9.2.1 createEnemies()

```
void Game::createEnemies (
    int  child_ammount,
    int  adult_ammount,
    int  mother_ammount,
    int  interval )
```

Create enemies and set their spawn time.

Parameters

<i>child_ammount</i>	Number of child cockroached to spawn
<i>adult_ammount</i>	Number of adult cockroached to spawn
<i>mother_ammount</i>	Number of mother cockroached to spawn
<i>interval</i>	Interval for cockroach spawn

Returns

NONE

7.9.2.2 CreateNewLevel

```
void Game::CreateNewLevel ( ) [slot]
```

Create map layout based on the current level.

Create New game settings for user based on the current level

Parameters

<i>None</i>	
-------------	--

Returns

None

7.9.2.3 GameOver

```
void Game::GameOver (
    void ) [signal]
```

7.9.2.4 IsWaveComplete

```
void Game::IsWaveComplete ( ) [slot]
```

Slot for checking if the current wave is complete.

Check if all enemies were killed or not

Parameters

None	
------	--

Returns

None

7.9.2.5 LevelTwo()

```
void Game::LevelTwo ( )
```

7.9.2.6 mouseMoveEvent()

```
void Game::mouseMoveEvent (
    QMouseEvent * event )
```

Cursor follows the mouse.

Parameters

<i>event</i>	tracks the position of mouse movement
--------------	---------------------------------------

Returns

None

7.9.2.7 mousePressEvent()

```
void Game::mousePressEvent (
    QMouseEvent * event )
```

Tracks the items pressed by the mouse.

Parameters

<i>event</i>	tracks the position of mouse movement
--------------	---------------------------------------

Returns

None

7.9.2.8 ResetLevel

```
void Game::ResetLevel ( ) [slot]
```

Waiting for player ot start the wave again.

7.9.2.9 setCursor()

```
void Game::setCursor (
    QString filename )
```

Change the cursor to the picture given as parameter.

Parameters

<i>filename</i>	points to the filename
-----------------	------------------------

Returns

None

7.9.2.10 SpawnAdult

```
void Game::SpawnAdult ( ) [slot]
```

Slot for spawning adult cockroaches.

Parameters

NONE	
------	--

Returns

NONE

7.9.2.11 SpawnChild

```
void Game::SpawnChild ( ) [slot]
```

Slot for spawning child cockroaches.

Parameters

NONE	
------	--

Returns

NONE

7.9.2.12 SpawnMother

```
void Game::SpawnMother ( ) [slot]
```

Slot for spawning mother cockroaches.

Parameters

NONE	
------	--

Returns

NONE

7.9.2.13 StartNextWave

```
void Game::StartNextWave (
    void ) [signal]
```

7.9.2.14 StartWave

```
void Game::StartWave ( ) [slot]
```

Slot starting the wave and creating the enemies.

Create numbers of enemies

Parameters

None	
------	--

Returns

None

7.9.2.15 UpdateBalance

```
void Game::UpdateBalance ( ) [slot]
```

Slot updating player balance in game view.

Check user banking balance again

Parameters

None	
------	--

Returns

None

7.9.2.16 WaitForPlayer

```
void Game::WaitForPlayer ( ) [slot]
```

Slot for Waiting for the player to start the wave again.

7.9.2.17 WaveComplete

```
void Game::WaveComplete ( ) [slot]
```

Slot for handling when wave is complete.

Parameters

None	
------	--

Returns

None

7.9.3 Member Data Documentation

7.9.3.1 adult_killed

```
int Game::adult_killed

7.10 ItemNotPlacebleTile Class Reference

```
#include <item_not_placeble_tile.h>
```

Inheritance diagram for ItemNotPlacebleTile:

Public Member Functions

- [ItemNotPlacebleTile](#) (QString file_path, int width, int height, QPointF coord)
Construct a new Item Not Placeble Tile:: Item Not Placeble Tile object Create a tile where items can not be placed.
- virtual [~ItemNotPlacebleTile](#) ()

7.10.1 Constructor & Destructor Documentation

7.10.1.1 ItemNotPlacebleTile()

```
ItemNotPlacebleTile::ItemNotPlacebleTile (
    QString file_path,
    int width,
    int height,
    QPointF coord )
```

Construct a new Item Not Placeble Tile:: Item Not Placeble Tile object Create a tile where items can not be placed.

Parameters

<i>file_path</i>	File path for the image
<i>width</i>	Width the image need to fit in the tile
<i>height</i>	Height the image need to fit in the tile
<i>coord</i>	Corrdinate where to set tile once created

7.10.1.2 ~ItemNotPlacebleTile()

7.12 MachineGunTower Class Reference

```
#include <machine_gun_tower.h>
```

Inheritance diagram for MachineGunTower:

Public Slots

- void [AcquireTarget](#) ()
MachineGunTower::AcquireTarget Overrides the *Tower::AcquireTarget* and uses its own *Fire()* method.

Public Member Functions

- [MachineGunTower](#) (QGraphicsItem *parent=0)
Constructor MachineGunTower Sets graphics, creates area_of_effect and sets barrel lenght.
- void [Fire](#) ()
MachineGunTower::Fire Override for *Fire()* method. Adds bullet spread with random angle.

Additional Inherited Members

7.12.1 Constructor & Destructor Documentation

7.12.1.1 MachineGunTower()

```
MachineGunTower::MachineGunTower (
    QGraphicsItem * parent = 0 )
```

Constructor [MachineGunTower](#) Sets graphics, creates area_of_effect and sets barrel lenght.

Parameters

<i>parent</i>	An optional parent return None
---------------	--------------------------------

7.12.2 Member Function Documentation

7.12.2.1 AcquireTarget

```
void MachineGunTower::AcquireTarget ( ) [slot]
```

[MachineGunTower::AcquireTarget](#) Overrides the [Tower::AcquireTarget](#) and uses its own [Fire\(\)](#) method.

7.12.2.2 Fire()

```
void MachineGunTower::Fire ( ) [virtual]
```

[MachineGunTower::Fire](#) Override for [Fire\(\)](#) method. Adds bullet spread with random angle.

Reimplemented from [Tower](#).

The documentation for this class was generated from the following files:

- [src/include/machine_gun_tower.h](#)
- [src/machine_gun_tower.cpp](#)

7.13 MainWindow Class Reference

```
#include <mainwindow.h>
```

Inheritance diagram for MainWindow:

Public Slots

- void [start_on_click](#) ()

Public Member Functions

- [MainWindow](#) (QWidget *parent=nullptr)
- [~MainWindow](#) ()

7.13.1 Constructor & Destructor Documentation

7.13.1.1 MainWindow()

```
MainWindow::MainWindow (
    QWidget * parent = nullptr )
```

7.13.1.2 ~MainWindow()

```
MainWindow::~MainWindow ( )
```

7.13.2 Member Function Documentation

7.13.2.1 start_on_click

```
void MainWindow::start_on_click ( ) [slot]
```

The documentation for this class was generated from the following files:

- [src/include/mainwindow.h](#)
- [src/mainwindow.cpp](#)

7.14 Mother_cockroach Class Reference

```
#include <mother_cockroach.h>
```

Inheritance diagram for Mother_cockroach:

Public Member Functions

- [Mother_cockroach](#) (int health, int speed, int value, int child_health, int child_speed, int child_value, QList< QPointF >pointsToFollow, QGraphicsItem *parent=0)

Constructor [Mother_cockroach](#) defines the adult cockroach object, it defines the speed, value, enemy path, the initial location and position offset appear on the map.

Additional Inherited Members

7.14.1 Constructor & Destructor Documentation

7.14.1.1 Mother_cockroach()

```

Mother_cockroach::Mother_cockroach (
    int health,
    int speed,
    int value,
    int child_health,
    int child_speed,
    int child_value,
    QList< QPointF > pointsToFollow,
    QGraphicsItem * parent = 0 )

```

Constructor [Mother_cockroach](#) defines the adult cockroach object, it defines the speed, value, enemy path, the initial location and position offset appear on the map.

Parameters

<i>health</i>	Set health
<i>speed</i>	Set speed
<i>value</i>	Set value
<i>pointsToFollow</i>	Set pointsToFollow
<i>child_health</i>	Set child health
<i>child_speed</i>	Set child speed
<i>child_value</i>	Set child value
<i>parent</i>	An optional parent

The documentation for this class was generated from the following files:

- [src/include/mother_cockroach.h](#)
- [src/mother_cockroach.cpp](#)

7.15 Pellet Class Reference

```
#include <pellet.h>
```

Inheritance diagram for Pellet:

Public Member Functions

- [Pellet](#) (`QGraphicsItem *parent=0`)
 Constructor [Pellet](#).

Additional Inherited Members

7.15.1 Constructor & Destructor Documentation

7.15.1.1 Pellet()

```
Pellet::Pellet (
    QGraphicsItem * parent = 0 )
```

Constructor [Pellet](#).

Parameters

<i>parent</i>	An optional parent return None
---------------	--------------------------------

The documentation for this class was generated from the following files:

- [src/include/pellet.h](#)
- [src/pellet.cpp](#)

7.16 ShotgunTower Class Reference

```
#include <shotgun_tower.h>
```

Inheritance diagram for ShotgunTower:

Public Slots

- void [AcquireTarget](#) ()
ShotgunTower::acquire_target overrides the [Tower::AcquireTarget\(\)](#) and uses instead its own fire() method.

Public Member Functions

- [ShotgunTower](#) (QGraphicsItem *parent=0)
Constructor [ShotgunTower](#) inherits from [Tower](#) Creates area_of_effect and connects timer to its overwritten Acquire↔ Target method Sets Barrel lenght.
- void [Fire](#) ()
ShotgunTower::fire creates five bullets with different angles that goes towards the target.

Additional Inherited Members

7.16.1 Constructor & Destructor Documentation

7.16.1.1 ShotgunTower()

```
ShotgunTower::ShotgunTower (
    QGraphicsItem * parent = 0 )
```

Constructor [ShotgunTower](#) inherits from [Tower](#) Creates area_of_effect and connects timer to its overwritten AcquireTarget method Sets Barrel lenght.

Parameters

<i>parent</i>	An optional parent
---------------	--------------------

7.16.2 Member Function Documentation

7.16.2.1 AcquireTarget

```
void ShotgunTower::AcquireTarget ( ) [slot]
```

ShotgunTower::acquire_target overrides the [Tower::AcquireTarget\(\)](#) and uses instead its own fire() method.

7.16.2.2 Fire()

```
void ShotgunTower::Fire ( ) [virtual]
```

ShotgunTower::fire creates five bullets with different angles that goes towards the target.

Reimplemented from [Tower](#).

The documentation for this class was generated from the following files:

- src/include/[shotgun_tower.h](#)
- src/[shotgun_tower.cpp](#)

7.17 Tower Class Reference

```
#include <tower.h>
```

Inheritance diagram for Tower:

Public Slots

- virtual void [AcquireTarget](#) ()

Tower::acquire_target Checks if enemies are in the area_of_effect, sets target and calls method fire() A Virtual method.

Public Member Functions

- [Tower](#) (QGraphicsItem *parent=0)

Constructor Tower An abstract class that inherits from QGraphicsPixmapItem and QObject.

- double [DistanceTo](#) (QGraphicsItem *item)

Tower::distanceTo Calculates distance from tower to an item.

- virtual void [Fire](#) ()

Tower::fire Creates a bullet that will travel towards the target.

- void [RotateTowardsEnemy](#) (int angle)

Tower::RotateTowardsEnemy Rotates the tower.

- void [SetCenterPoint](#) (QPointF center_point)

Tower::setCenterPoint Set function for towers center point.

- QPointF [GetCenterPoint](#) ()

Tower::getCenterPoint Get function for towers center point.

- void [SetBarrelLenght](#) (int lenght)

Tower::setBarrelLenght Sets the value holding lenght of the barrel of the tower.

- int [GetBarrelLenght](#) ()

Tower::getBarrelLenght Gets the value holding lenght of the barrel of the tower.

- void [CreateAreaOfEffect](#) (int scale_factor)

Tower::createAreaOfEffect Creates the PolygonItem area_of_effect from points and scales them accordingly.

Protected Attributes

- QGraphicsPolygonItem * [area_of_effect](#)
- QPointF [target](#)
- bool [has_target](#)
- QPointF [center](#)
- int [barrel_lenght](#)

7.17.1 Constructor & Destructor Documentation

7.17.1.1 Tower()

```
Tower::Tower (
    QGraphicsItem * parent = 0 )
```

Constructor [Tower](#) An abstract class that inherits from QGraphicsPixmapItem and QObject.

Parameters

<i>parent</i>	An optional parameter
---------------	-----------------------

7.17.2 Member Function Documentation

7.17.2.1 AcquireTarget

```
void Tower::AcquireTarget ( ) [virtual], [slot]
```

Tower::acquire_target Checks if enemies are in the area_of_effect, sets target and calls method fire() A Virtual method.

7.17.2.2 CreateAreaOfEffect()

```
void Tower::CreateAreaOfEffect (
    int scale_factor )
```

Tower::createAreaOfEffect Creates the PolygonItem area_of_effect from points and scales them accordingly.

Parameters

<i>scale_factor</i>	The scale_factor defines the size of the polygon
---------------------	--

7.17.2.3 DistanceTo()

```
double Tower::DistanceTo (
    QGraphicsItem * item )
```

Tower::distanceTo Calculates distance from tower to an item.

Parameters

<i>item</i>	
-------------	--

Returns**7.17.2.4 Fire()**

```
void Tower::Fire ( ) [virtual]
```

Tower::fire Creates a bullet that will travel towards the target.

Reimplemented in [MachineGunTower](#), and [ShotgunTower](#).

7.17.2.5 GetBarrelLenght()

```
int Tower::GetBarrelLenght ( )
```

Tower::getBarrelLenght Gets the value holding lenght of the barrel of the tower.

Returns**7.17.2.6 GetCenterPoint()**

```
QPointF Tower::GetCenterPoint ( )
```

Tower::getCenterPoint Get function for towers center point.

Returns**7.17.2.7 RotateTowardsEnemy()**

```
void Tower::RotateTowardsEnemy (
    int angle )
```

[Tower::RotateTowardsEnemy](#) Rotates the tower.

Parameters

<i>angle</i>	The angle of rotation
--------------	-----------------------

7.17.2.8 SetBarrellLenght()

```
void Tower::SetBarrellLenght (
    int lenght )
```

Tower::setBarrellLenght Sets the value holding lenght of the barrel of the tower.

Parameters

<i>lenght</i>	
---------------	--

7.17.2.9 SetCenterPoint()

```
void Tower::SetCenterPoint (
    QPointF center_point )
```

Tower::setCenterPoint Set function for towers center point.

Parameters

<i>center_point</i>	The center point of the tower
---------------------	-------------------------------

7.17.3 Member Data Documentation**7.17.3.1 area_of_effect**

```
QGraphicsPolygonItem* Tower::area_of_effect [protected]
```

7.17.3.2 barrel_lenght

```
int Tower::barrel_lenght [protected]
```

7.17.3.3 center

```
QPointF Tower::center [protected]
```

7.17.3.4 has_target

```
bool Tower::has_target [protected]
```

7.17.3.5 target

```
QPointF Tower::target [protected]
```

The documentation for this class was generated from the following files:

- [src/include/tower.h](#)
- [src/tower.cpp](#)

7.18 Wallet Class Reference

```
#include <wallet.hpp>
```

Inheritance diagram for Wallet:

Public Member Functions

- [Wallet](#) (int ammount)
Construct a new [Wallet:: Wallet](#) object.
- void [Deposit](#) (int ammount)
Deposit money to player wallet.
- bool [Withdraw](#) (int ammount)
Withdraw money from player wallet.
- int [GetBalance](#) () const
Get balance.
- void [SetNewBalance](#) (int ammount)
Set New Balance for player.

7.18.1 Constructor & Destructor Documentation

7.18.1.1 Wallet()

```
Wallet::Wallet (
    int balance )
```

Construct a new [Wallet:: Wallet](#) object.

Parameters

<i>balance</i>	Player balance
----------------	----------------

7.18.2 Member Function Documentation

7.18.2.1 Deposit()

```
void Wallet::Deposit (  
    int ammount )
```

Deposit money to player wallet.

Parameters

<i>ammount</i>	
----------------	--

7.18.2.2 GetBalance()

```
int Wallet::GetBalance ( ) const
```

Get balance.

Parameters

<i>ammount</i>	Player Wallet
----------------	-------------------------------

Returns

None

7.18.2.3 SetNewBalance()

```
void Wallet::SetNewBalance (  
    int ammount )
```

Set New Balance for player.

Parameters

<i>ammount</i>	Player Wallet
----------------	-------------------------------

Returns

None

7.18.2.4 Withdraw()

```
bool Wallet::Withdraw (  
    int ammount )
```

Withdraw money from player wallet.

Parameters

<i>ammount</i>	
----------------	--

Returns

None

The documentation for this class was generated from the following files:
